--- CAPALYTIC ACTIVITY: Phosphatidylcholine + H(2)0 = 1-
acylglycerophosphocholine + a fatty acid anion.

--- COFACTOR: Binds 1 calcium ion per subunit (By similarity).

--- SUBCELLULAR LOCATION: Secreted.

--- SIMILARITY: BELONGS TO THE PHOSPHOLIPASE A2 FAMILY.

CHINGTION: SPERM SURFACE MEMBRANE PROTEIN THAT MAY BE INVOLVED IN SPERM-EGG PLASMA MEMBRANE ADHESION AND FUSION DORING FRETILIZATION. COULD HAVE A DIRECT ROLE IN SPERM-ZONA BINDING OR MIGRATION OF SPERM FROM THE UTERUS INTO THE OVIDUCT. INTERACTIONS WITH EGG MEMBRANE COULD BE MEDIATED VIA BINDING BETWEEN ITS DISINITESTIN-LIKE DOMAIN TO ONE OR MORE INTEGRINS RECEPTORS ON THE EGG. : SIBCELLULAR LOCATION: Type I membrane protein.

1. TISSUE SPECIFICITY: EXPRESSED SPECIFICALLY IN SPERMATOGENIC CELLS IN THE SEMINITESTOUS CELLS. NOT DETECTED IN FETAL TISSUES.

2. IN THE SEMINITESTOUS CELLS. NOT DETECTED IN FETAL TISSUES.

2. IN THE SEMINITESTOUS CELLS. NOT DETECTED IN FETAL TISSUES.

3. DOMAIN COULD BE INVOLVED IN THE BINDING TO EGG INTEGRIN RECEPTOR DOMAIN COULD BE INVOLVED IN THE BINDING.

3. IN THE SIGNAL AND THE METALLOPROTEASE DOWAIN ARE CLEAVED DURING THE SPIRAL PROTEIN RECEPTOR SET AND THE SIGNAL AND THE METALLOPROTEASE DOWAIN ARE CLEAVED DURING THE SPIRAL SHAWALS, EXISTS AS A HETERODIMER COMPOSED OF AN ALPHA AND BETA SUBBUITAS: IN HUMAN, FERFILLIN ALPHA IS A PSEUDOGENE.

3. SIMILARITY: CONTAINS I EGF-LIKE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. "Goodpasture antigen-binding protein, the kinase that phosphorylates the Goodpasture antigen, is an alternatively spliced variant implicated in autoimmune pathogenesis.";
J. Biol. Chem. 275:40392-40399(2000).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (NOV-2000) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: Phosphorylates on Ser and Thr residues the Goodpasture autoantigen (in vitro). Isoform 2 seems to be less active.

-!-CMTALTYTC ACTIVITY: AFP + a protein = ADP + a phosphoprotein.
-!-SUBLUTY: Interacts with COL4A3.
-!-SUBCULTY: Interacts with COL4A3.
-!-SUBCULTY: Interacts with COL4A3.
-!-ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2/Delta26/GBBDD56; are produced by alternative splicing.
-!-TISSUE SPECIFICITY: Widely expressed.
-!-SIMILARITY: CONTAINS 1 PH DOMAIN.
-!-SIMILARITY: CONTAINS 1 START DOMAIN.
                                                                                                                                                                                                                                                                                                       15-JUN-2002 (Rel. 41, Created)

"Nucleotide sequence of a cDNA for a water channel protein
(aquaporin) homolog from Atriplex canescens (Pursh.) Nutt.";
Plant Physiol. 108:1291-1292(1995).
-! FUNCTION: WATER SPECIFIC CHANNEL.
-! SUBCELLULAR LOCATION: Integral membrane protein.
-! SIMILARITY: BELONGS TO THE MIP/AQUAPORIN FAMILY (TC 1.A.8).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1, Application US/07847369
Patent No. 5349055
GENERAL INFORMATION:
APPLICANT: Persson, Hakan B. et al.
TITLE OF INVENTION: Neurotrophic Factors Having Altered TITLE OF INVENTION: Receptor Binding Specificities
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  59.6%; Score 34; DB 3; Length 10;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
